extremely r

The 1799 Cents

It is recorded that 904,700 of these cents
ere minted - this is ridiculous as it would
hen compare in rarity to the 1798 which is
ery common, the '99 being the rarest date of
ll cents. It is probable that not more than
00 - 1000 were minted - or else they all disappeared
he cents of '99 are never found in uncirculated
condition altho there is one which makes such
laim; as a matter of fact the large majority of
he specimens found in collections are so much worn
s to cause doubt as to date and genuineness.
Onefable states these cents were shipped to Africa in
heir entirety by a firm in Salem, Mass. Other stories
ay they were remelted to furnish copper to sheath
our frigates; Another, - the dies were unsatisfactory
nd 1798 dies were still available and were used,
hen finally an 1799 die was made it was 1800, r
nly a few struck. This is a mystery cent and
f all our date types (except 1793 lib Cap)
ewer of these cents are found in fine condition
r better than any other. A much sought after,
xtremely hard coin to get in nice condition

The Cents of 1800

. Records show that there were 2,822,175 minted; by far the record up to date, & being three times that of any other year so far. Why is the 1800 scarcer than 1798 – there were many more in 1800., perhaps some of them went the same way as the 1799 Doubty list one major type- "Draped Bust", and 17 varieties, over 1798, over 1799, over 179. There is a tendency for the reverse die's to break at the fraction.

bove "ATES". The point of the bust impression
overs "OF" and passes under "ES"

The Cents of 1801

According to records 1,362,857 cents
were minted this year. The was but one
ype - the "Draped Bust". The dies are
arked for their poor execution and many
rrors, in legend & fraction. There are but
3 die varieties according to Doughty, and
ll of which are fairly easy to distinguish
ue to errors etc: Varieties occur $\frac{1}{000}$,
stem to wreath; II for V) $\frac{\bullet 1}{000}$, $\frac{1}{000}$,
over $\frac{1}{000}$; Wavy field, derided date, blunt 0
rfect 1, separated fraction etc. An inter-
ting year from a variety stand point.
me varieties are particularly hard to
me by in fine condition - the "three
ront" by examide

The Cents of 1802

Records show that 3,435,100 cents were minted this year. The record to date. The 1802 cents are common in ordinary condition. There is but one type - the Draped Bust. There are, according to Doughty about 15 varieties. Some interesting varieties exist, such as the "Stemless Wreath"; $\frac{1}{000}$ fraction plus some interesting die breaks.

Overflowing Hair (Rare)

The Cents of 1803

Recorded number minted 2,471,353, hence common in ordinary condition. There is still but one major type - The Draped Bust. There are, according to Doughty 19 varieties; there is at least one more - the "large date - small fraction variety. Fractions existed large and small; dates - larger small; various die breaks, stemless wreath to fraction errror. "States" has a number of die breaks. The 1803's are becoming more popular to variety collectors. It probably ranks after the 1793 and 1794 series.

From Sheraton Col.

Brk. Obv: Used in 1804 Restrike.

Purchased from Sheraton 1948

Small Date - Large Fraction - Broken Obv.
Known as the "Scarred Neck" because of
Die Break mid-way between hair & throat.

The 1804 Cents

Number minted said to have been 756,838, but is obviously in error as they rarely turn up. A very rare date, the 2nd rarest in the large cents. The actual number minted was probably closer to 25,000 if that many; some guess as low as 5,000.

Only one type - the so called Draped Bust. Only one die was used, of which 3 states exist; perfect; broken obv. broken obv + rev: There also exists what is known as a "mint restrike in which and 1803 altered date was used in combination with an 1816 rererse (Obv: D*196; Rev: New "G") both dies were worn and rusty. The restrike was made about 1860. It is realy not a restrike but a counterfeit. Dies are now destroyed.

In 1864 an uncirculated 1804 brought *32.00
In 1948 " " 1804 " *750.00

Counterfeits of the 1804 are numerous, and are usually 1801 altered date, or electrotypes. The specimens showing the obv. break only are the rarest of the 3 states.

The 1804 No. Doughty *198.

← Date →

1804 Cent

Heading	Entry
Type	Draped Bust
State	B - Perfect Dies
Sharpness	Usual - Well Struck
Position	Usually well centered. Well & evenly spaced. Distant from border. Closer generally to Bust
1	Blunt top 1. Close to curl
8	
0	Slightly below 4.
4	Crosslet 4: Rt. stand of 4 in line with crosslet. Close to Bust.
LIBERTY	"RTY" slightly above "LIBE" BERTY →
FRACTION	Figures in Fract. lge and well spaced. Sharply struck.
America	Top Bkn ← Strong - Well Struck - even
United	Strong - Well Struck - even.
States	Strong - Well Struck - even
OF	Strong - Well Struck - even.
ONE	Each Letter following higher than other.
CENT	Uneven. C & T touches leaves.
Border	Generally complete, well struck and central.
Defects	Two short perpendicular lines to right of crosslet of 4
Bust	Perfect - Well Struck up
Field	Perfect - Free of Defects.
Wreath	A thin line 1/16" obliquely up from leaf touching G. 16 Leaves (L); 19 Leaves (R)
Stems	Each stem 3/16" long. Ends blunt. 5 berries on each stem.
Bow	Perfect.
Frac. Line	Short - about central - strong
Ribbon Ends	Left end lower. Left closer & than right is to O. Ends blunt

RESTRIKE OF THE 1804 CENT

A fake 1804 was manufactured in the U. S. Mint by some employees of that institution about the year 1860 to satisfy the demand for this rare date. This piece is known as the "restrike" but fortunately for collectors it was a patchwork job and easily distinguished from a genuine 1804 cent. An old rusty die was used for the obverse which makes the field of the coin pitted and a die of about the year ~~1818~~, which is much different from an 1804, was used for the reverse. To aid collectors, an illustration of the 1804 restrike is shown here.

The Small 1807 over 1806
Very Rare - From the Newcomb Collection
Purchased from Dr Wm H. Sheldon.
This particular variety was unknown to
Doughty. It is easily recognized by the
blunt 1 and the small 7 when compared
to the large overdate which always comes
with a perfect 1

The Cents of 1808

Records show that 1,109,000 cents were minted during this year. A decided change in design took place – the old Draped Bust, an artistic one, was dropped and a squat, unartistic, bust with a lot of hair banded with a ribbon reading LIBERTY – the date appeared below, and the head was flanked front & rear with 13 thick, fat and unartistic 6 pointed stars. The cent went from beauty to the beast until 1816 when it grew worst. After 1807 the cent collectors fell off sharply due I believe to just these fact. This new bust was called the Turban Head. Doughty lists 2 varieties for this year and Clapp 3. The two interesting ones are the 13 & 12 star (due to die defect) variety are the most interesting.

1808 CENT

Number	Type	Stars	Bust	Liberty	Figures of Date	Legend	Wreath	ONE	CENT	Rev Die Breaks	Obv Die Breaks		Clapp	Doughty	Sheldon	Rarity	Date

From the Col. Nicklan Col.
Purchased from Romano 1947

here is but one pair of dies for this year. the obv., on some authorities is an 1809 over 808 - other's say no. Some say the recutting under the 9 is an 8. The 11th star has a defect, a NW ray - or a slight tail about 1/16" long. The Rev: is the same as 1808 Rev A(?) but is now found cracked from the border thru the letter 'T' in STATES; the crack then passing thru the tips of the highest pair of leaves. There is also a slight crack ~~about~~ above the letter 'T' in CENT. Very Scarce in good condition, usually found in very worn condition. In 1884 an uncirculated specimen sold for $20.50; in 1947 $200.00 The number minted is said to have been 222,867. Altered dates (1808) are common attempts to deceive the amature collector. A marked feature of the 1809 is a weakness of the border milling. The obverse is usually found in much poorer condition than the reverse. It is believed the obv. die was continued in use after being badly corroded.

The Cents of 1810

Records show that 1,458,500 cents were minted in this year. But one major type - the Turban Head contrives Doughty sts four die varieties, while Clapp lists five. The most important variety is the '10 over '09. The year can be termed uncommon.

— Overdate Variety —

The Cents of 1811

1. Records indicate that 218,025 cents were minted during this year. They are very scarce. Two Obv & Rev dies are known and only two varieties exist, the overdate and perfect date, the former of which is the rarer. Altered dates are common (from 1819 and 1841) to deceive the amateur. These alterations are clumsy and easily detected. This year is extremely difficult to obtain in Very Fine Condition or better. The 1811's are Doughty 215 and 216.
